

## Shelter building challenge!

Initiative skills include problem solving, teamwork and creativity. From a physical activity perspective, you may be using small fiddly movements to tie off ropes or sheets, as well as big movements to lay out and set up your shelter cover.

For this challenge you firstly need to identify useful items from around the house that you could use to build a shelter (ask a parent or guardian before using them). Then, using these, you need to build a sturdy shelter that would be able to protect you from the sun and breeze (if your equipment is waterproof you could design it to protect you from rain too!).

Below are some common shapes used for bivouac (temporary) shelters:

And a couple of examples of indoor dens:
